Queue Announcer

Staff guide: calling out orders at the counter

For version 1.2.1 and later

What this guide is about

Queue Announcer calls out orders for you. You type the order code from the receipt, and the computer plays a bell and reads the code out loud, so customers know their food is ready. This guide shows you how to set it up and use it at the counter.

> **"A, 1, 0, 5.** Please collect your order."
> "Once again, A, 1, 0, 5."

Who it's for: counter staff and supervisors.

Version: written for Queue Announcer **1.2.1**.

Contents

1 **Install** — What you need and how to put it on a PC 2

2 **Announce an order** — Type, announce, and what each button does 3

3 **Call again from Recent** — Recall an order that was already called 4

4 **Floating window** — Keeping the announcer on top of other apps 4

5 **Settings** — Volume, speed, bell and more 5

6 **Quick fixes** — What to do when something goes wrong 6

1 Install

You need

Microsoft Edge
On a computer, for the Ava voice.

Speakers on
Loud enough for the counter.

Internet
To start. Keeps working if it drops.

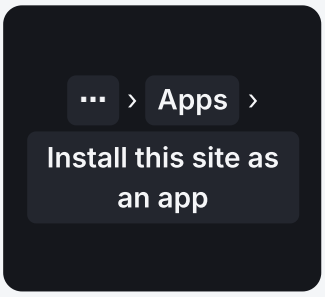

Install it (one time per PC)

1

Open the link in Edge

2

Install it

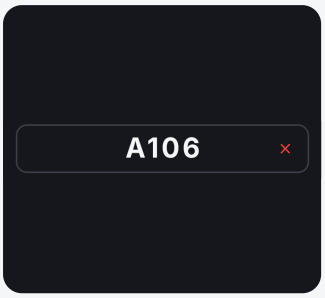

3

Open from the desktop icon

Updates install themselves. No need to reinstall.

2 Announce an order

Type the code

From the receipt

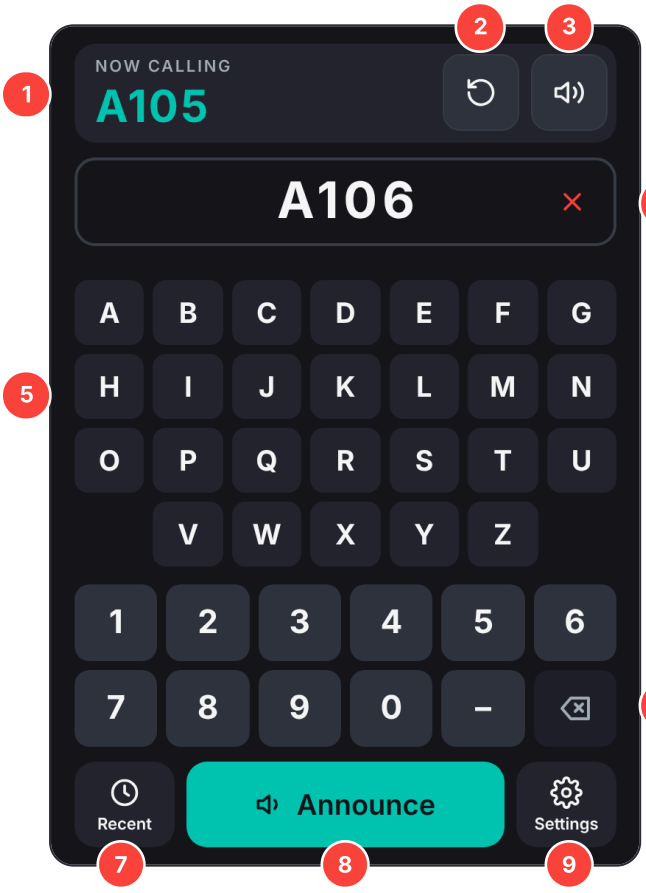

Tap Announce

Bell + voice, twice

Wait until it finishes

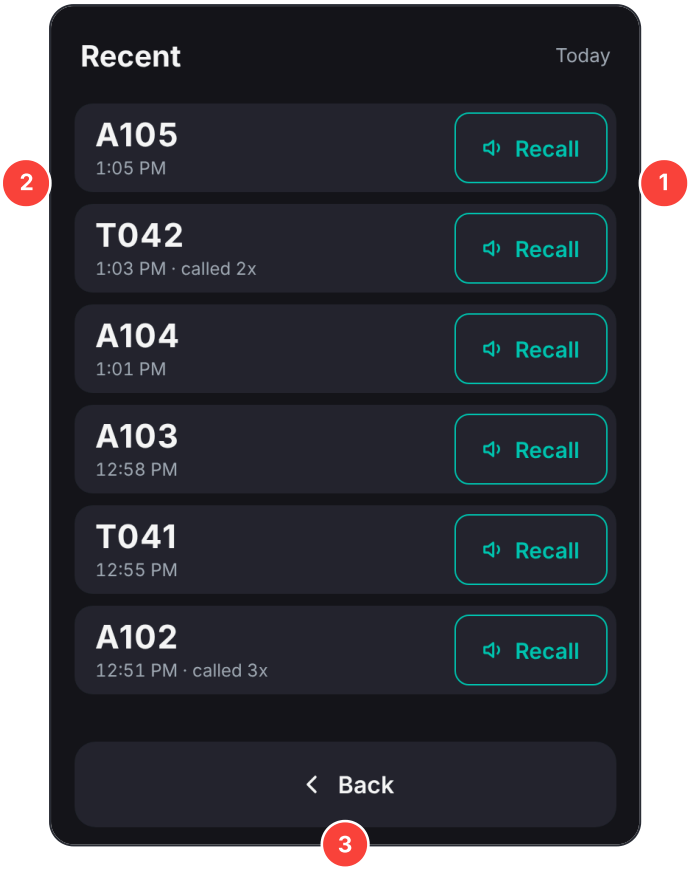

1. Now calling
2. **Repeat** last order
3. **Mute** (red = off)
4. ✕ clear code
5. Letters and numbers
6. ⌫ delete one
7. **Recent** orders
8. **Announce**
9. **Settings**

One at a time. Next code can be typed while it speaks.

Up to **8** characters, e.g. **T-042**.

Keyboard: **Enter** announce, **Esc** clear.

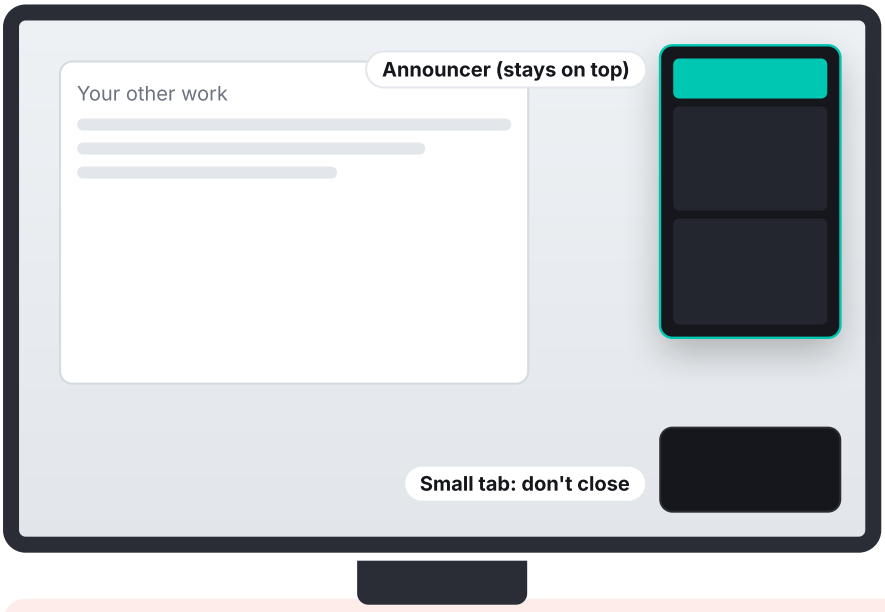

3 Call again from Recent

1. **Recall** plays it again
2. Code, time, times called
3. **Back** to the keypad

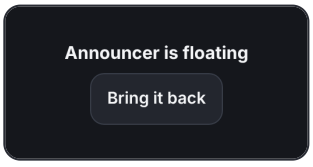

ⓘ Today only, on this PC. Swipe to scroll.

4 Floating window

First tap → announcer floats on top. Drag it where you like.

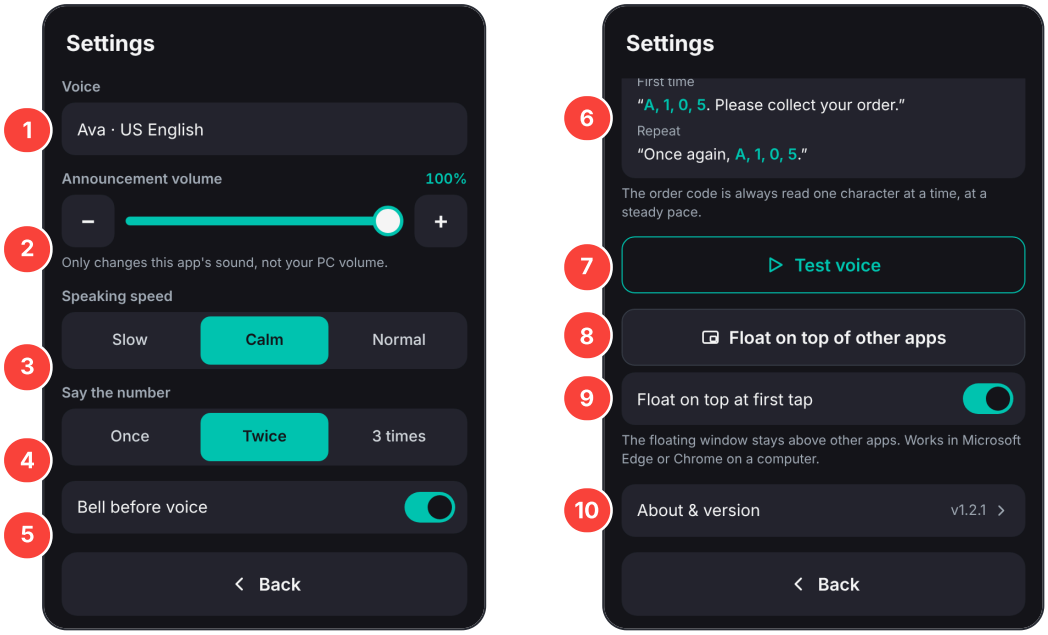

Small tab moves to the bottom right.

Bring it back returns it to the main window.

⊗ **Don't close the small tab**: it closes the announcer too. Minimize it with **–** instead.

5 Settings

1. **Voice**: Ava
2. **Volume** (this app only)
3. **Speed** of the words
4. **Say the number** 1, 2 or 3 times
5. **Bell** on / off, sound + Test
6. What will be said
7. **Test voice**
8. Open **floating window**
9. Float at first tap on / off
10. **About & version**

Each PC keeps its own settings. The code is always read at the same steady pace.

6 Quick fixes

No sound
Mute not red? Volume up in Settings? Edge not muted in Windows **Volume mixer**?

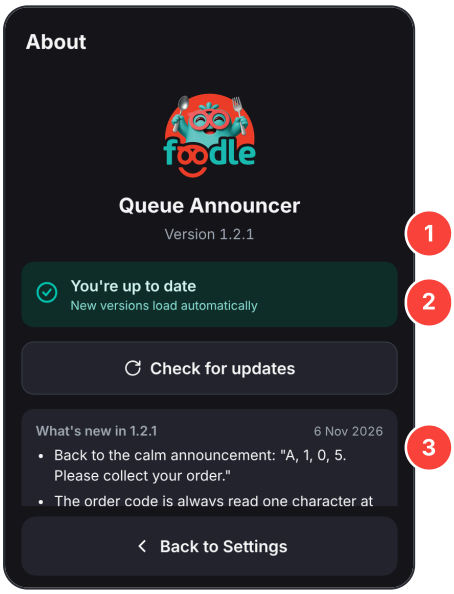

Bell plays, no voice
Check Edge isn't muted, then tap **Repeat**. Check the internet.

Voice sounds robotic
Open from the desktop icon, not another browser. Update Edge.

No floating window
Settings → **Float on top of other apps**. Edge on a computer only.

Announcer disappeared
The small tab was closed. Open the app again from the desktop icon.

Need the newest version
Close the app fully and reopen. Check **About & version**.

Which version am I on?

1. Version number
2. Up to date or not
3. What changed (older versions below)

CALL	AGAIN	SILENCE	FIX TYPING
Code → Announce	Repeat · Recall	Mute	⌫ one · ✕ all
